

Please reject the National Association of Broadcaster's petition 04-160. Satellite radio has become a common mainstay of listening to me and I am currently listen to XM instant traffic and weather on a daily bases, it is harder to find a instant traffic report or weather, unless you use a internet ready device, which currently is not cost effective in pittsburgh market. Also you do not get the same information as on XM. What will the NAB do when XM generates this information into data for new GPS Navigation systems in the next year... this information will only get more closely tied into vehicle systems as time goes on. Radio as we know it will slowly phase out for most consumers in cities that do not cater to the music they want to listen to , ex Pittsburgh. I have been a loyal XM listen for over 2 years now and I hope that you will protect their interests in this matter

Thank You for listening

Jayanth Gowda
